

PROJECT PITCH

Owner/s:

Kyle Ermentrout & Adrienne Paquin

Phase and Cohort:

Phase 2 NYC 051721

One sentence app description:

CRUDdy Dictionary: An online dictionary that allows users to search words, add their own words, and add personal definitions to existing words.

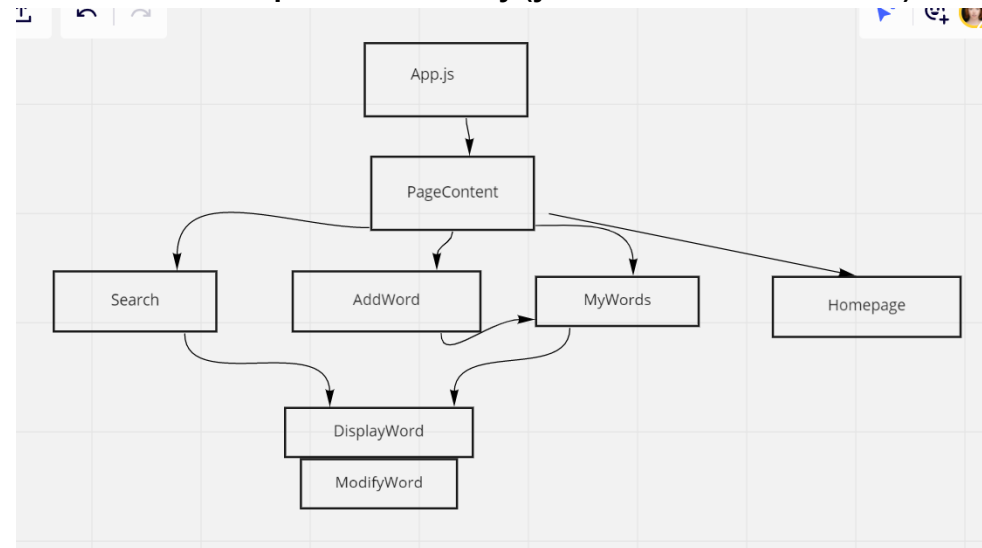

How Your JSON-Server is going to be structured:

```
{  
  "Id": 1,  
  "Word": "word",  
  "Definition": "definition",  
  "partOfSpeech": "noun"  
  "Synonyms": [word, word, word],  
  "Example": "example"  
}
```

User Stories (remember about CRUD):**MVP:**

User will be able to:

- Search existing API for some word information (definition etc)
- Add "personal definition" to existing words and store in own database
- Add novel words to own database and generate word info (???)
- Display word of the day on home page

Wire Frame & Component Hierarchy (you can link external Docs)

See attached PDF

Stretch goals:

- Generate images for words
- Link quote APIs to words
- Link Watson API to hear the word said
